Subject Pollution from Pa

Message Body

Dear Ms Jackson:

As a Pa citizen, I would urge you to take action on pollutants that enter our rivers, namely the Susquehanna River. This river is suffering from runoff which not only has plant nutrients (fertilizer) but also organic chemicals from herbicides and insecticides. These are causing damage to the wild life in the river; they are also causing dead zones in the Chesapeake Bay. This later issue affects other states as well and should be addressed by the EPA.

Thank you for your time.

Very truly yours,

Ken Baumert
